NESTED LAYOUTS IN HTML

When you target a design:

A calculative approach toward breaking down the design is to divide it in Vertical and Horizontal layout.

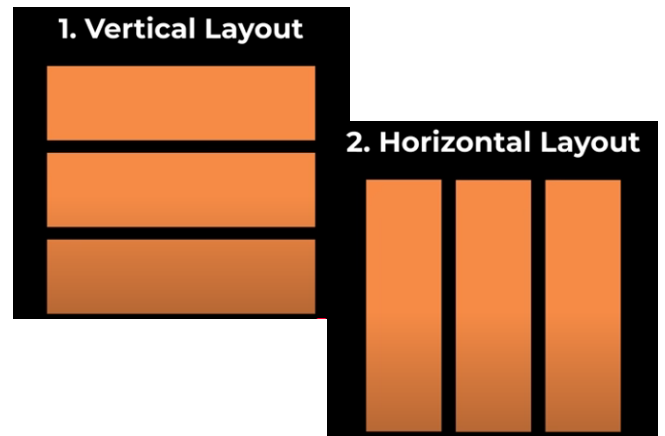

Vertical Layouts

Vertical layouts are div elements with inline-block display type.
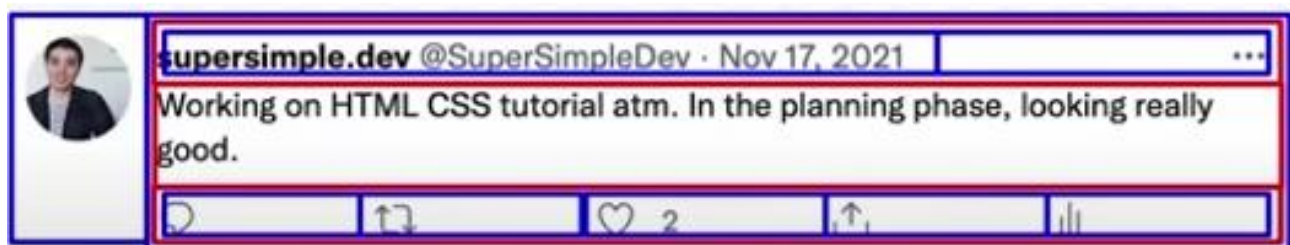

display:inline-block;

Horizontal Layouts

Horizontal layouts are div elements with block display type.

Display:block;

Once we see a design, we can fragment them down as vertical and Horizontal layout blocks component to simplify the understanding of the design and make coding easier. We can one by one code each fragment and hence style it strategically.

For example:

Now coding it is easier.
